PROFESSIONAL SUMMARY

Analyst who keeps AI systems honest. I build and monitor AI systems hands on: a multi agent research platform with run monitoring, an honest critic quality review, and centralized prompt management, plus a real time NLP trend pipeline. At Penta I held AI assisted reporting to strict validation standards, verifying every AI summary before it shipped.

TECHNICAL PROJECTS

NeuraStream – Multi Agent Content Intelligence Platform |

<https://github.com/robdreamville/NeuraStream>

- Built a Python multi agent platform with LangGraph that researches topics across Reddit and Google, where research subagents hand a structured brief to the main content agent and an honest critic agent scores each output before delivery.
- Built a FastAPI backend serving a real time dashboard for monitoring runs, viewing analytics, and auditing run history.
- Centralized prompt management so content templates are reusable across runs instead of one off scripts.
- Enforces structured outputs with Pydantic schemas (VideoScript, Article, XThread) so agent results come back clean and machine readable.

Nexus Prime – Multi Agent System with Three Tier Memory |

https://github.com/robdreamville/agent_with_memory

- Built a CLI multi agent system with three tier memory: a Reflex keyword map, a working buffer distilled by a Gatekeeper LLM, and a ChromaDB permanent vault searched through a parallel retrieve and judge pipeline.
- Registry of Pydantic validated tools executed concurrently, including a meta tool that writes new tools with a compile check gate before generated code is accepted.

SportsOracle – Real Time Trend Intelligence Tool | <https://github.com/robdreamville/sportsoracle>

- Pulls content from the Reddit API and scrapes ESPN with requests and BeautifulSoup, translates posts to English, embeds them with sentence transformers, stores them in a vector database, and clusters trending topics with BERTopic.
- Summarizes each trend with transformer models grounded in retrieved posts via RAG, and serves the results in a Streamlit dashboard for non technical users.

WORK EXPERIENCE

Consultant, Customer Service | FedEx Office | Hoboken, NJ

Sept. 2025 – Present

- Work directly with customers to diagnose order and file issues, then explain the fix in plain language.
- Review client specs and digital files with high attention to detail to catch errors before production.

- Manage time sensitive print production and shipping orders in a high volume environment while meeting strict daily deadlines.

Media Monitoring Analyst Intern | Penta Group | Remote

May. 2024 – Nov. 2024

- Used ChatGPT and in-house AI tools to draft media monitoring reports faster, acting as the human in the loop who verified every AI-produced summary before delivery.
- Wrote news summaries and monitored coverage across outlets for recurring client reports.
- Worked daily with the reporting team to keep client deliverables on schedule.

Junior Software Developer | Infosys | Remote

Aug. 2022 – Sept. 2023

- Built and tested REST APIs in C# through an 8-month engineering training program, using Postman for endpoint testing and debugging.
- Completed coursework in Python and Java alongside the C# track.

EDUCATION

B.S. Computer Science – Graduated 2023, New Jersey City University, Jersey City, NJ

A.A. Liberal Arts – Graduated 2020, Hudson County Community College, Jersey City, NJ

SKILLS

AI Operations: Prompt Engineering, LangChain and LangGraph, Gemini, OpenAI and Anthropic APIs, Ollama, RAG, Vector Databases and Embeddings (ChromaDB), LLM Output Validation, Structured Outputs (Pydantic), AI Agent Prototypes, MCP Integrations

Data: Python, Pandas, NumPy, SQL (joins, aggregations, grouping), Excel, Data Cleaning and Validation, Statistics Foundations

Delivery: REST APIs, Git and GitHub, Streamlit, FastAPI, ETL and Data Pipelines, Reporting Automation, Jira and Confluence, Agile and Scrum, Data Storytelling

Cloud: Microsoft Azure

CRM: Salesforce (user)

Languages: English, Spanish (bilingual)

CERTIFICATIONS

NVIDIA Building LLM Applications With Prompt Engineering, Certificate of Competency, Aug. 2025
